

Generations of Play

Dear readers,

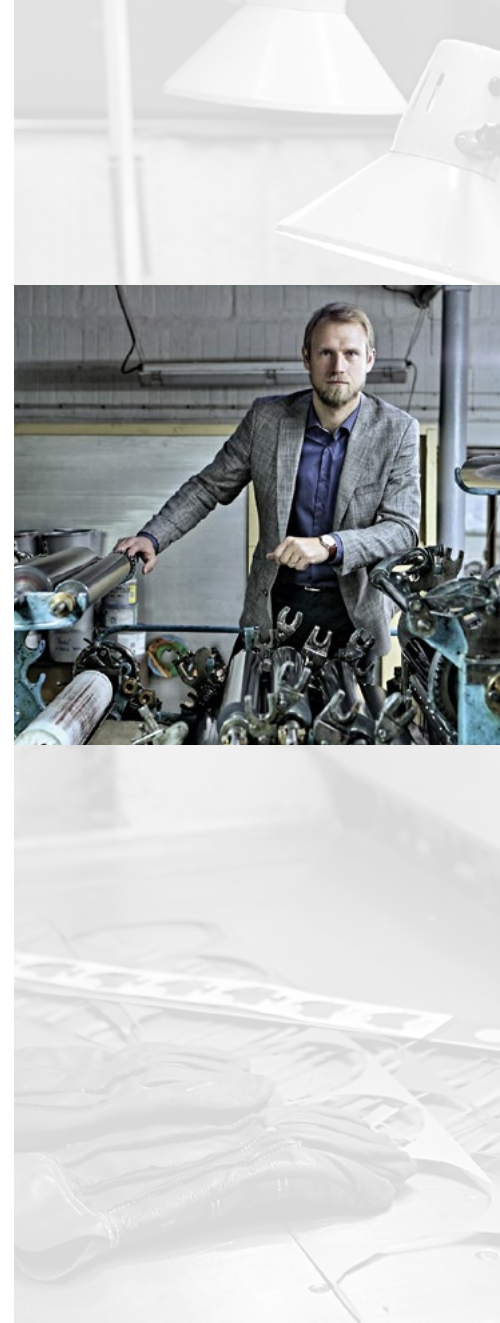

The catalogue you are holding in your hands contains mechanical toys developed and manufactured by KOVAP Náchod s.r.o.. This catalogue not only presents our products, but also the technologies necessary for their production. However, the most important tool for manufacturing beautiful and high-quality mechanical toys is not technological in nature, but rather it's the people who, in addition to their skill, patience and diligence, also have years of experience and a loving relationship with the product that their hands help to create. I am happy that it is just such people that work at KOVAP.

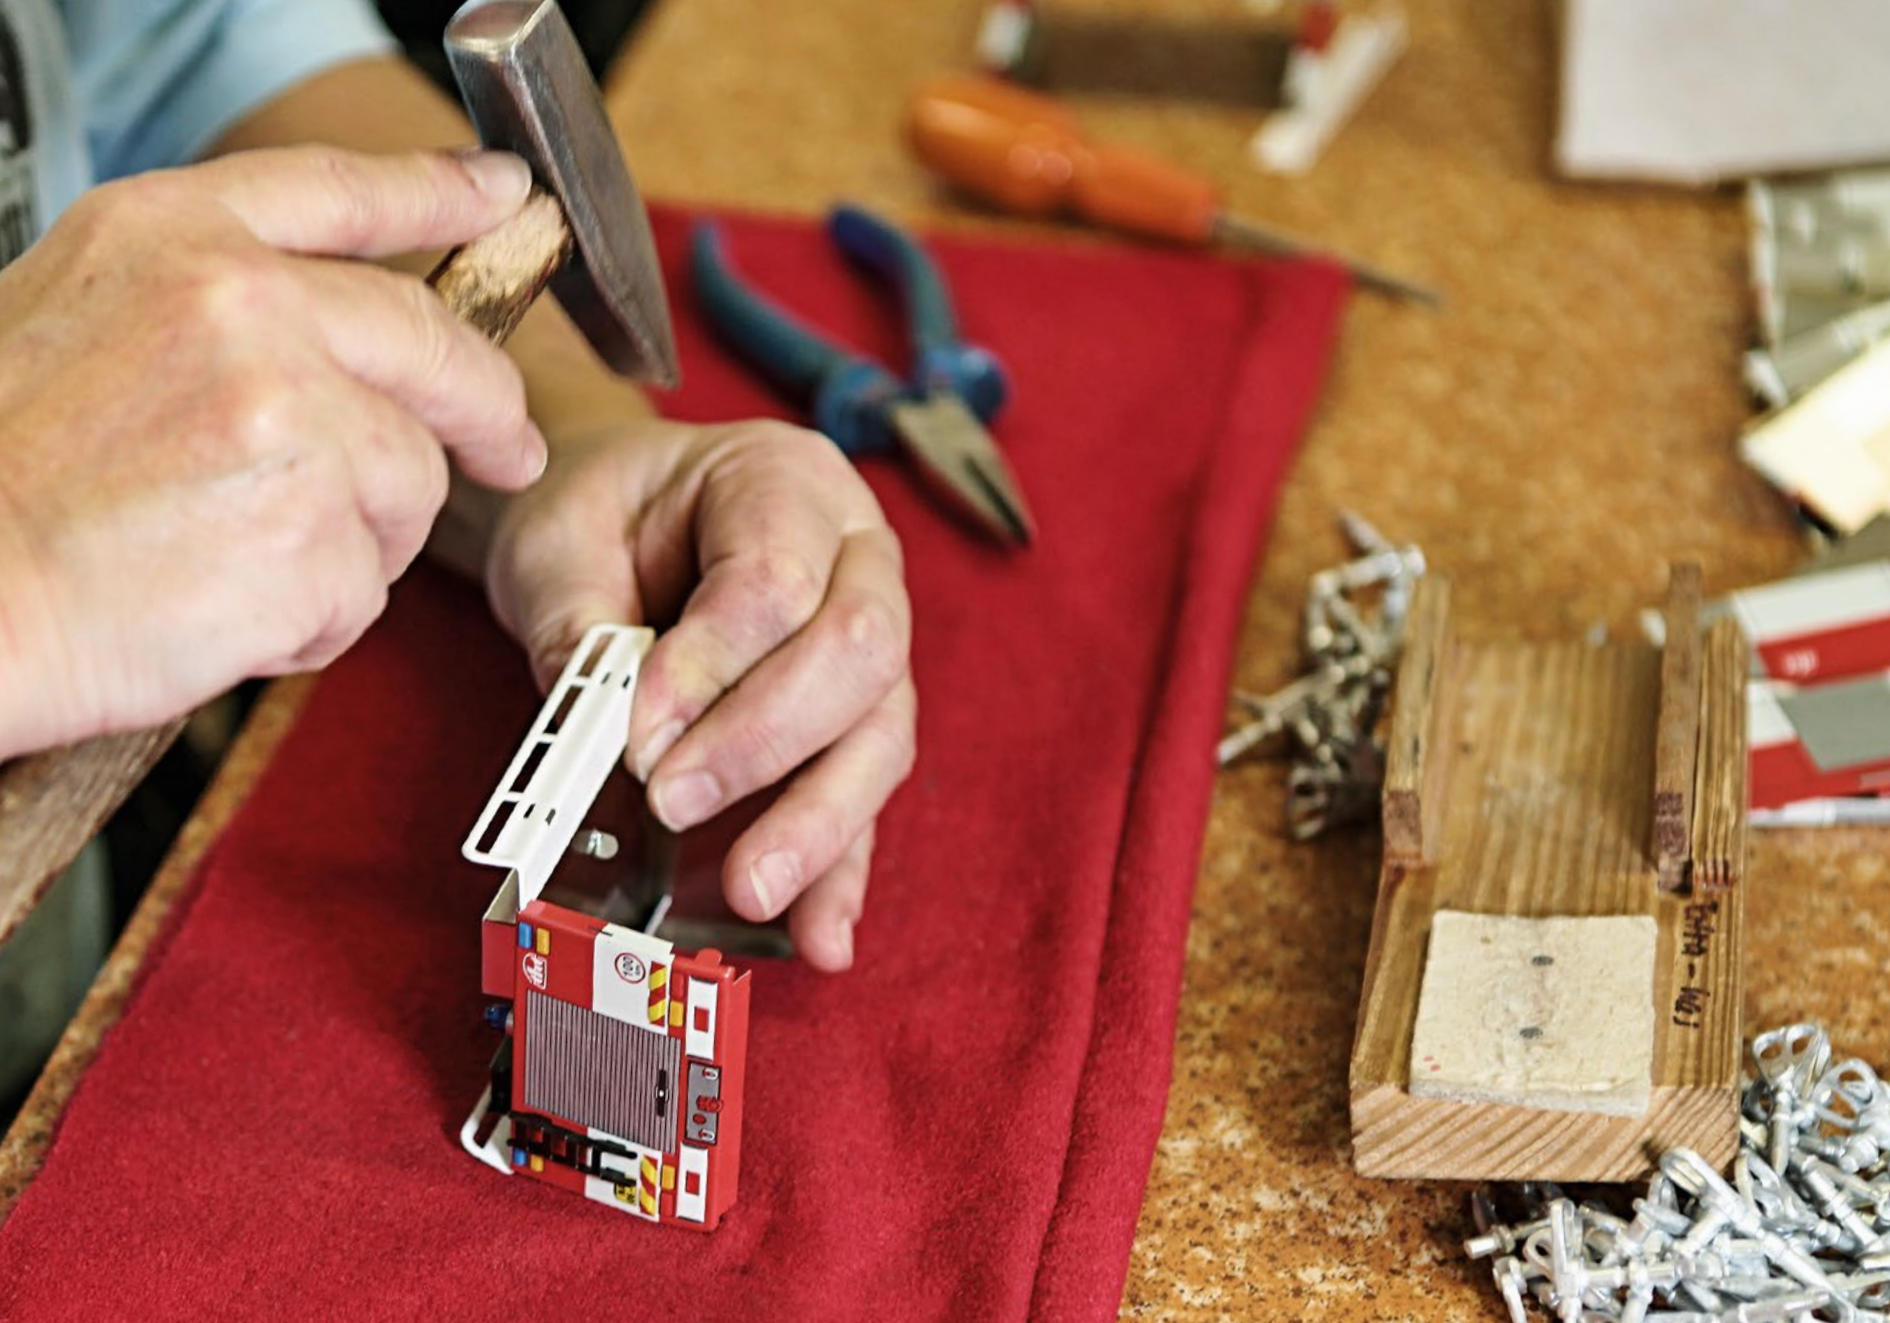

Even though entertainment is moving rapidly into the virtual world, on the screens of computers, game consoles or mobile phones, there is definitely no need to worry about the fate of the traditional mechanical toy. Toys reflect the state of the world and technology. Although we cannot imagine our lives without electronics, our lives are still based in mechanics, i.e., the simple movement of bodies from A to B. Moreover, this cannot be done without gears, transmissions or springs. As long as people make extensive use of mechanical machines, they will also play with mechanical toys. What's more, ours use a basically inexhaustible renewable energy source for their propulsion: the movement of the human hand.

In 2021, KOVAP is celebrating its 75th anniversary. For the occasion, we will present our vision for the development and production of mechanical toys in the 21st century. A vision that reminds the public that a mechanical toy is not just for playing with, it is also a source of knowledge for young, future designers or equally it can be a beautiful interior decoration. It will be a vision that proves that a mechanical toy can unite generations.

I hope that mechanical toys remain a source of fun, joy and entertainment in the lives of all those that read the KOVAP catalogue.

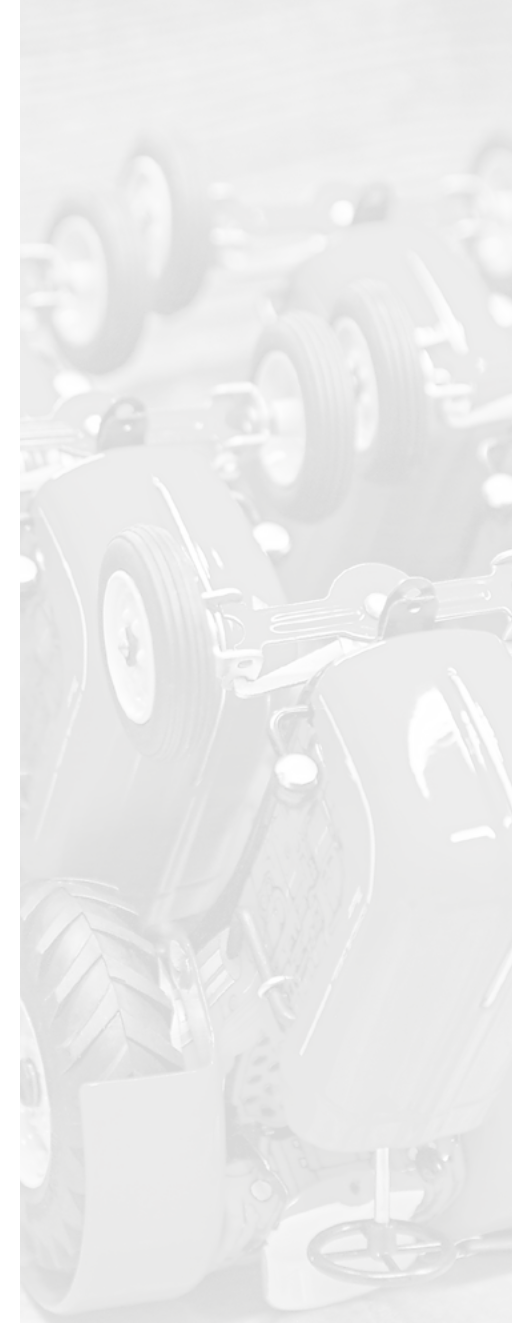

Filip Klepek

History

KOVAP Náchod, s. r. o. is a Czech company that **manufactures traditional tin toys of world renown**. It can boast a wide range of original tin toys, including the legendary ZETOR 25 tractor, a wind-up ladybird or popular models of the heavy-duty off-road Tatra truck. In every KOVAP product, there is an **emphasis on manual production, precise design and a long life**. The toys are all environmentally friendly.

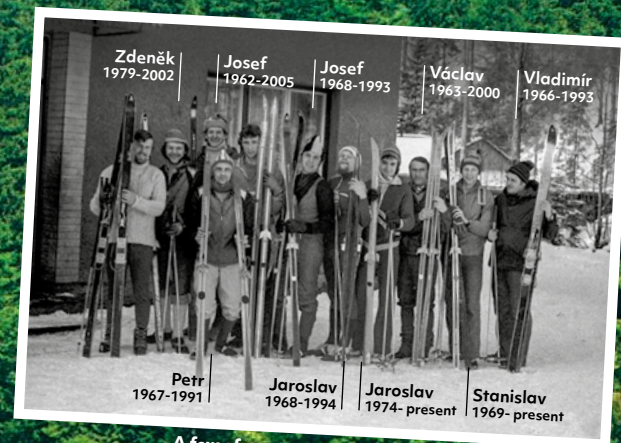

KOVAP's tin products are an ideal gift for children and adults alike and are one of the popular traditional souvenirs from the Czech Republic.

In Semily, the tradition of making mechanical toys from tin is **over 70 years old**. The Sedlák brothers started production at the beginning of 1946. In a building rented from a former textile printing house, the Sedlák brothers set up a tin printing press, a press shop, a tool shop, an office and a warehouse. The company employed 15 workers. The first toy to be made was a **steam roller**.

The Sedlák brothers' company developed successfully until 1950. At the time, the political situation did not favour private enterprise, which led to the Sedlák brothers entering the **SVED Liberec** cooperative. Eduard Sedlák worked there as a designer and from 1954-1956 he and his colleague František Zeman managed to develop the now legendary **ZETOR tractor** toy. This mechanical tin toy had an original clockwork drive, which had three speeds forward and reverse. The ZETOR tractor is also unique in that it has been **manufactured and sold continuously since 1957**.

The Sixties saw changes in the county boundaries for self-government and the Semily plant was affiliated to Kovodružstvo Náchod. This was the start of plastics being used in the manufacture of the toys, replacing some of the original sheet metal components. This development continued into the Seventies, but the production of tin mechanical toys was also kept, as they were becoming a popular seller in the "capitalist" markets. At the time, there were several Kovodružstas operating in Czechoslovakia and export companies had a problem distinguishing between them, therefore Kovodružstvo Náchod began exporting under the brand name **KOVAP (kov a plast)** (metal and plastic). The end of the Eighties saw cooperation with the German toy company Georg Kellermann Nürnberg, which made an offer to purchase the machines for the production of model tin toys. The then head of the Semily plant, Václav Drašnar, convinced the management of Kovodružstvo to become a **partner with the German toy industry**, and so some of Kellermann's toys began to be manufactured in Semily in the late Eighties.

In the early Nineties, the Kovodružstvo cooperative was broken up. The Semily and Nový Hrádek plants were transformed into a new cooperative that took on the KOVAP brand name that had been used for export since the Seventies. The newly-established company gradually **ceased to manufacture plastic toys and again specialized exclusively in mechanical tin toys**. Thanks to this step, in the mid-Nineties it won orders to manufacture replicas of mechanical tin toys from the well-known company **SCHUCO**, which had been producing toys since before the Second World War.

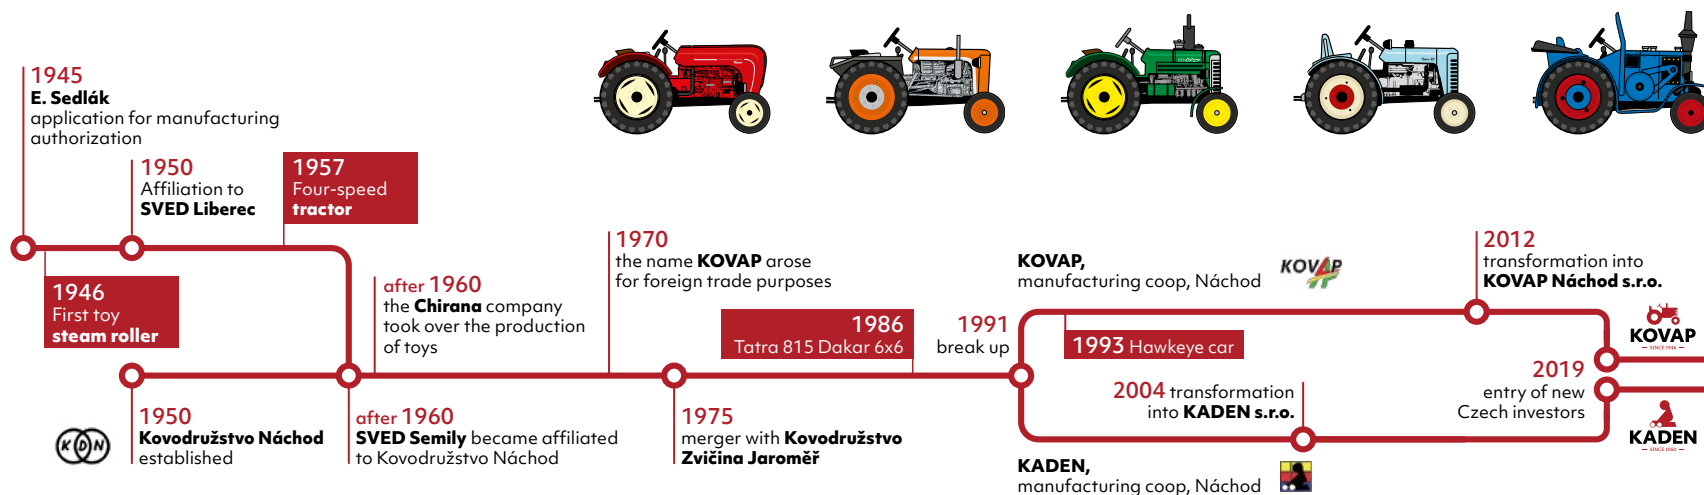

A few of our many loyal employees (in KOVAP from-to)

1992
Doly, Nový Hrádek

2020
Doly, Nový Hrádek

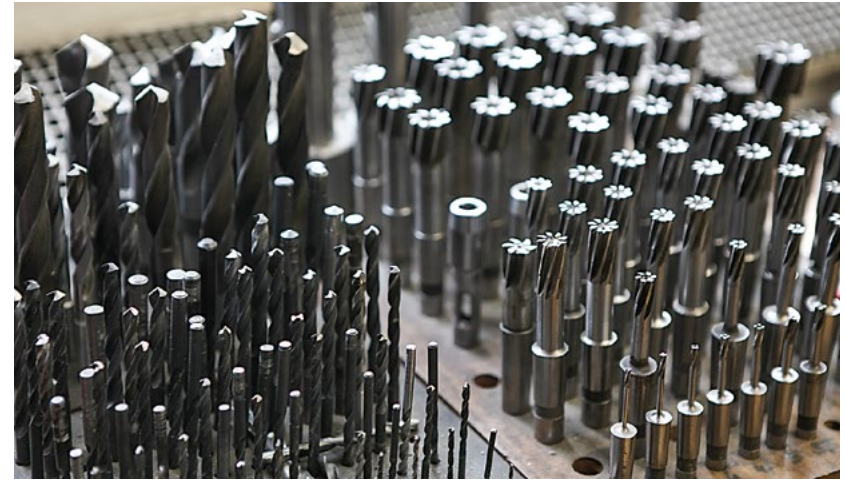

Despite the fact that the current toy market is saturated with electronics, or precisely because of it, the classic tin toy still has its loyal supporters and admirers.

2019 was a turning point for KOVAP in many ways. In the middle of the year, the **company changed owners** and work began on restructuring and modernization. It saw the acquisition of the company KADEN, which had once been one company with KOVAP for thirty years when Kovodružstvo Náchod was still in operation. **KADEN is a company producing models of cars, military vehicles, construction kits and metal parts.** Under the new management, the successful cooperation from the past is being revived.

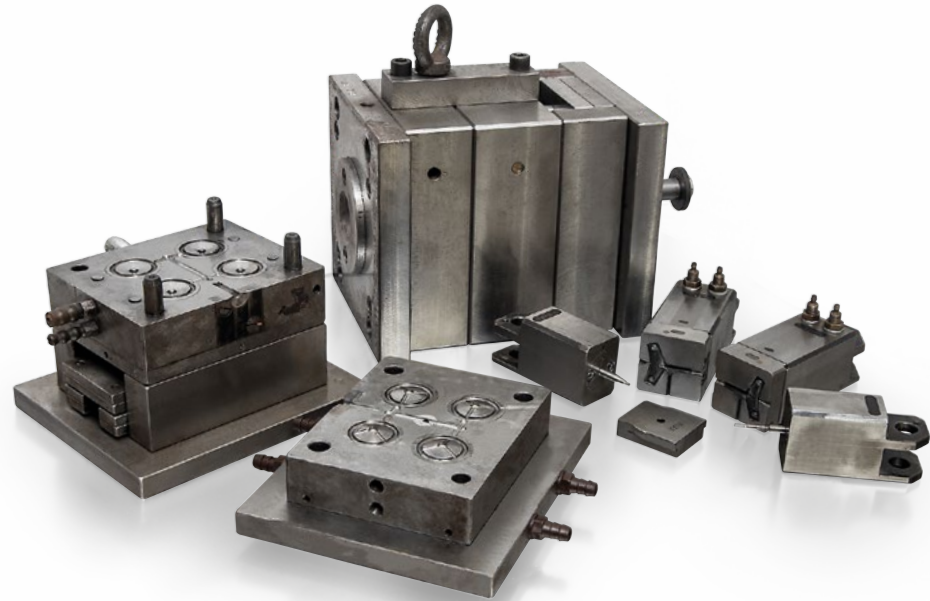

Despite 2020 being a generally unfavourable year, the companies are introducing modern production technologies, are creating new products and design packaging, and are seeking new sales channels through e-shops and social networks. Thanks to these activities, they are once again growing and getting closer to the wishes of their customers.

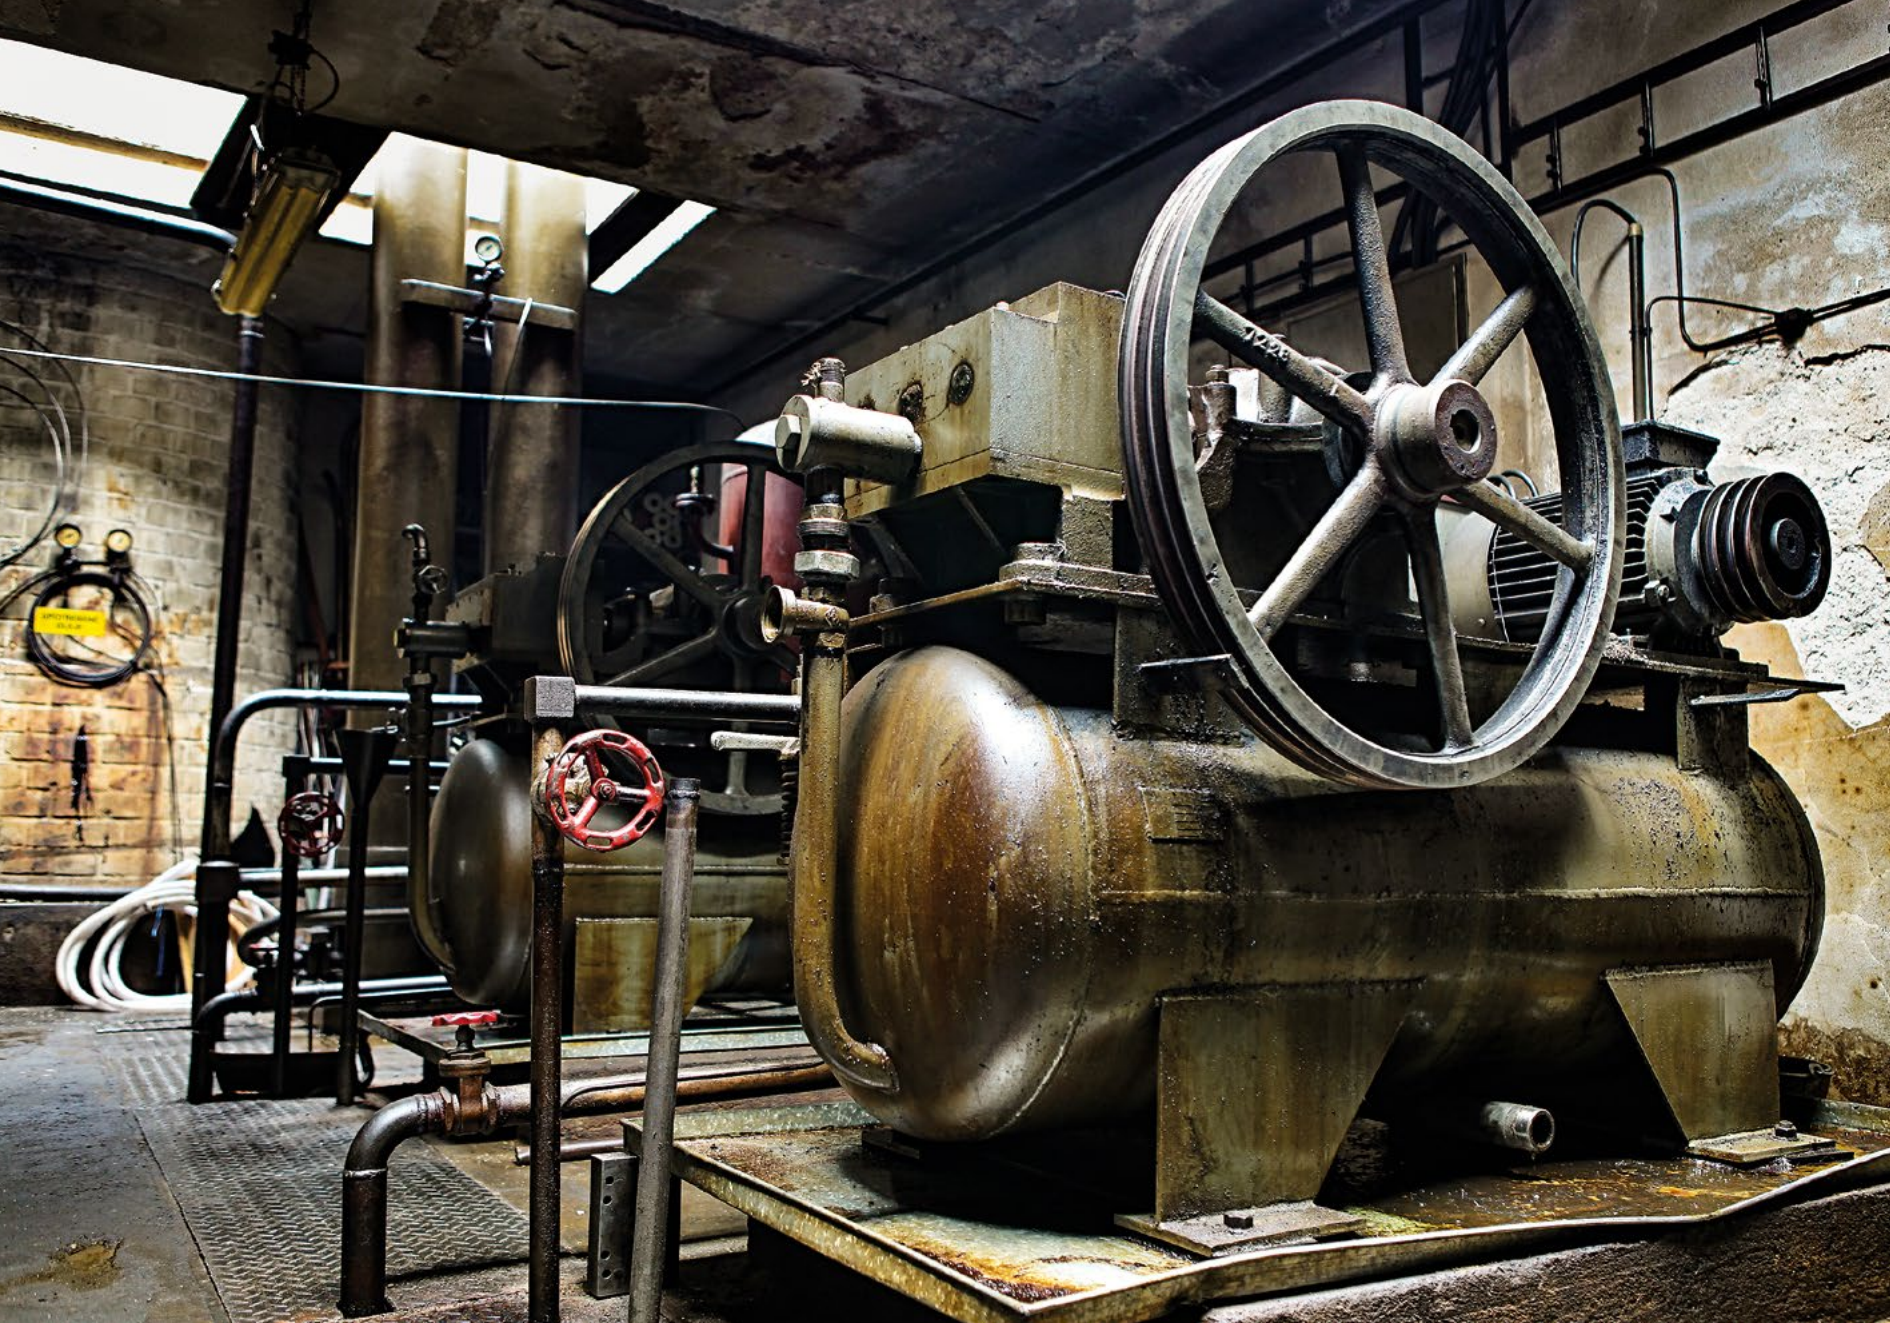

Metalworking

The days when we made steel moulds for toys by redrawing them from wooden standards with a pantograph are long gone, nevertheless we still have this equipment and technology available. Since the Seventies, we have been using ageless **lathes, grinders and drills** to make the moulds and jigs necessary for manufacturing our toys. **These tools' reliability will mean they will be used by generations after us.** At the turn of the millennium, **electrical discharge machining** technology was added to them. Thus, KOVAP became an independent tool shop, one where we can ensure all the development, construction and actual manufacture of the product and moulds under our own direction. Just to give you an idea, the manufacture of the **ZETOR 25 A** tractor involves over **70 moulds and jigs**, without which it would be impossible to produce the toy with such **precise workmanship and attention to detail.**

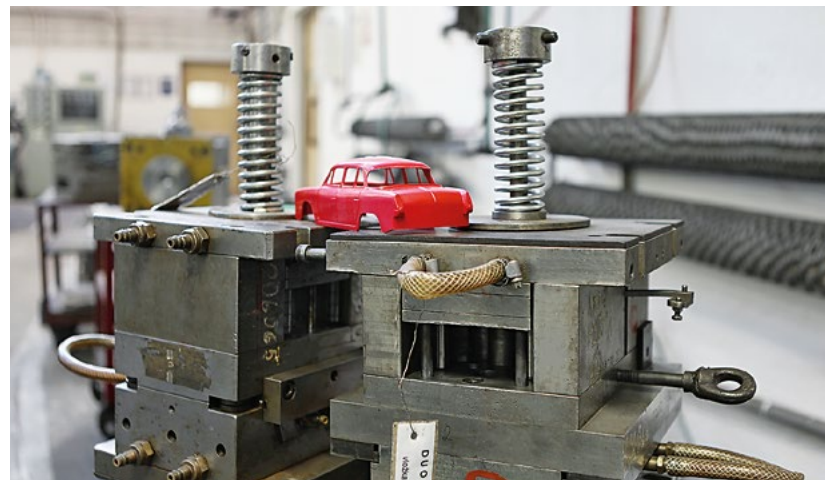

Sheet metal cutting and bending

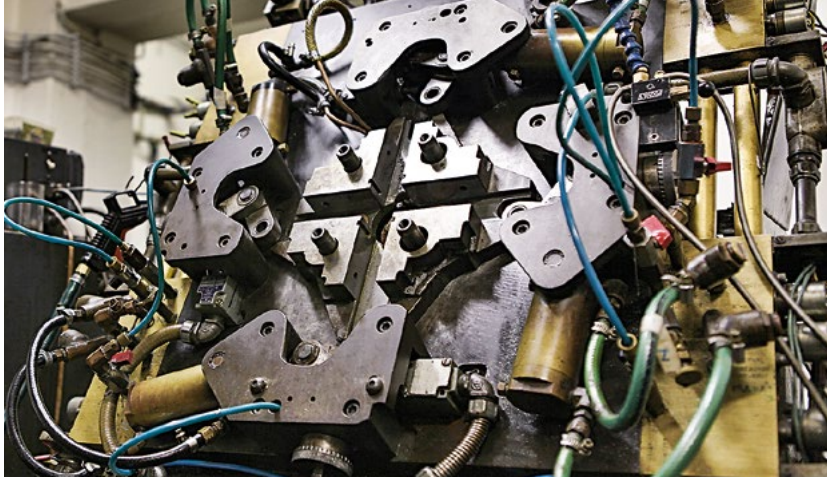

There is a certain magic to bending sheet metal that we have been practicing ever since we were established by the Sedlák brothers in 1946. Our machine park includes a total of **sixteen pressing machines** in the range of **10 to 40 tons of clamping force**. Not only do we think about how to shape the sheet metal, but also how to join it together into a compact unit, so that the sheet metal's sharp edges won't injure human and especially children's hands. **All our toys are certified as a safe product.**

Plastic injection moulding

Some products simply cannot be made of sheet metal, either for economic or logical reasons. For instance, a tyre. We can mould them all in the injection moulding facilities at the Nový Hrádek plant. **Even in pink**, if we so desired.

Zinc alloy die casting

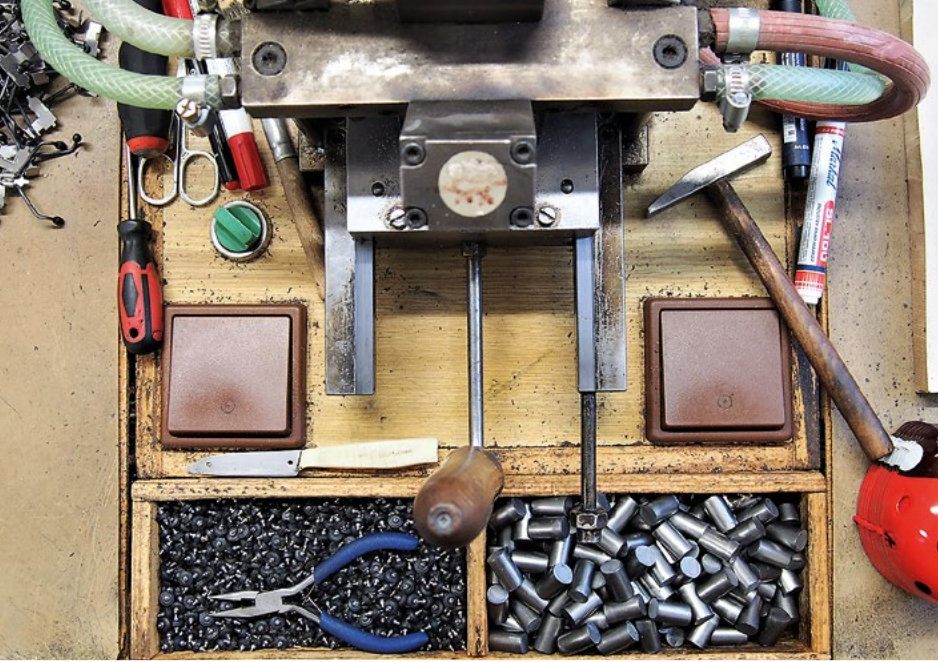

The zinc alloy die-casting machine took a curious route to find itself in the KOVAP machine park. **In the Seventies**, a talented rep for exports secured an order to sell toys to Canada. However, as was the custom at the time, no foreign exchange could flow in the opposite direction, and so a machine at a value corresponding to the needs of the then planned economy was shipped to the Czechoslovak Socialist Republic. It was made by **DYNACAST** and we work with it to this day. We appreciate its story and the fact that we have no maintenance costs for it. We always repair it ourselves, even though we no longer have the maintenance instructions for it.

Metal sheet offset printing

We buy our tin from the Slovak supplier U.S. Steel Košice and this is the only material entering the toy manufacturing plant that we buy abroad. **The offset machine was manufactured in 1942 by J. G. Mailänder in Stuttgart**, now called Koenig & Bauer. It wound up in the Náchod Kovodružstvo plant in Nový Hrádek in the Sixties. However, it wasn't put into operation until the end of the Eighties, when the original, even older, machine was taken out of service. From the very first days it was used to print tin for toys. We have calculated that during that time it has **printed a total of 900,000 sheet metal plates** in the format 765 x 535 x 0.32 mm. It continues to fulfil its role to this day and will continue to do so.

Hand assembly

All the **toys, including the clockwork mechanisms, are assembled by hand** by our skilled and experienced workers in the plant in Chuchelna near Semily. Our production documentation numbers a total of **8433 standardized manual assembly operations**. If you imagine that each standardization had to be agreed on by at least one hour of a verification series, it is a total of 8433 hours. Working on a single shift operation and working 260 days a year, it means it took **4 years just to record the standards for correctly calculating** the production costs of our toys. Standardization mainly took place in the Seventies, and Mr. Jindřich Tomíček can take the main credit for it. He was an ordained priest who was arrested as part of the church trials and sentenced in 1949 to 2.5 years in Pankrác Prison for reading a "pastoral letter". After his release, he managed to get approval to work as a priest, but not until 1984. In the meantime, he worked in the then Kovodružstvo Náchod. One of his jobs was as a standardizer.

Tractors and accessories

The tractor is without a doubt KOVAP's most popular product. It can boast a sophisticated design, a working steering wheel and a unique spring clockwork movement with three speeds, reverse and a handbrake. You can complete it with accessories such as flatbed trucks, potato lifters, seed drills and other agricultural machinery.

Toy and model manufacture in KADEN

www.kaden.cz

Kovodružstvo Náchod was founded in 1950. Its main activity was **to manufacture mechanical toys from printed sheet metal and plastics**. Examples of the cooperative's ancillary activities include installing central heating, manufacturing metal furniture or producing electronic components. Ever since the Seventies, its logo has been a picture of a kneeling child with a toy, which is also the symbol KADEN uses today. **Since the Nineties, its focus has been on manufacturing models** and it continues with this to this day. It specializes in **Tatra and Škoda** models. It also plans a series of toys for the youngest collectors.

Awards

Our toys combine tradition and **high-quality craftsmanship**. They are **safe for kids and environmentally friendly**. Generations have been playing with them and, despite the digital age, they are still attractive to today's kids. Thanks to that, we have won various awards for our products.

Awards we have won

Czech Toy of the Year 2011

The award went to our popular Agrosset 2, consisting of a tractor with a flatbed and six other pieces of agricultural machinery.

Our Certificates

The Right Toy

Our tower crane and Zetor tractor with flatbed trailer bear this certificate.
www.sdruzenihracky.cz

Safe Toy

All our toys, except for three collector's models, meet the criteria for this certificate.
